

County Weed Division receives grant to control noxious weeds

by Bend_Weekly_News_Sources

Pepperweed, Scotch Thistle and Whitetop Weeds to be targeted

Earlier this spring, the Oregon State Weed Board (OSWB) reviewed and approved a grant application for Deschutes County to work on three aggressive noxious weed groups growing in the County.

Scotch thistle is one of the noxious weeds to be targeted - photo by Standford.edu Deschutes County and Oregon Department of Agriculture (ODA) staff have identified potential weed sites in Bend, Tumalo, and Terrebonne for this ongoing weed project. Most noxious weeds involved in the program (Perennial pepperweed, Scotch thistle and Whitetop weeds) are growing on private land in less than one-acre infestions. Those sites have been mapped, surveyed, treated, monitored and evaluated for reseeding.

The weed project outlined above will cost \$20,400 to complete and the State Weed Board grant will assist in paying \$8,900 of that total cost. The weed project will begin this month and will be complete by late September of this year.

This significant weed project is a continuation of an earlier OSWB grant awarded to Deschutes County in 2003 to assess, survey, educate, treat, restore and monitor the spread of the same weeds.

The original grant request to OSWB in 2002 was \$7,359. That same year, OSWB funded the project for \$3,000.

This noxious weed project will be administered by Deschutes County's vegetation division at the Road Department. Weed surveying, treating, monitoring and land restoration will be completed by Deschutes County staff with support from Oregon Department of Agriculture staff.

For more information on this Oregon State Weed Board weed grant or Deschutes County's noxious weed control programs, call 322-7135.
